APRS
SCADA telemetry
feeder-head and in-line currents, voltages, switch status
switch status, topology
basic level: feeder-head currents and ratings
Fault verification
trace from the tripped device, checks
Fault indicators (ComPass)
Direction A/B mapped to Set/Clear
Fault location
first connection after the last Set indicator
Switching Advisor
ranked donors, restoration plan for the operator
currents
Load allocation
scales load models to SCADA currents
ADMS network data model
topology, catalog codes, ratings, load models
Distribution Power Flow (DPF)
unbalanced load flow: calculated loads and voltages
full DPF
Fault switching
isolation; upstream and donor restoration
topology
